1. What SettleANZ Does

SettleANZ is a professional website platform that helps people who are **new to Australia** plan their arrival, compare essential services, find trusted partners, and contact your team for support.

For your business: More qualified leads in one inbox, full control over content and SEO, a trustworthy mobile-friendly brand, and tools your non-technical team can use every day.

Who benefits

- **Visitors** — Practical guides, blog articles, directory, and easy contact options
- **Your sales team** — Organised leads with status tracking and notes
- **Marketing** — Blog, SEO, and social preview control
- **Partners** — Featured listings in the directory

2. Public Website — Pages & Features

Page	What visitors see
Home	Hero, benefits, founder story, testimonials, featured guides, partners, email capture, latest blog posts
New to Australia	Long arrival guide with checklists, first-week tips, and FAQs
Settlement Services	Package comparison, pricing, FAQs, and package booking form
Housing Guide	Rental advice and featured relocation partners
Banking Guide	Bank comparisons and money transfer recommendations
Migration Services	Visa information, agent listings, consultation and booking forms
Blog	Articles with categories, search, and full article pages
Directory	Searchable partner businesses by city and category
Contact	Contact details, listing enquiry, and contact form
About	Your story, values, and mission
Privacy & Terms	Legal pages with admin-managed SEO

Main menu typically shows: Home, New to Australia, Settlement Services, Blog, Directory, About, and Contact. Housing, Banking, and Migration pages are also available for links and search engines.

3. How Visitors Contact You

Every form on the site sends enquiries to your **Admin Dashboard**. You receive in-app notifications — no separate email setup required for basic lead capture.

Visitor action	Where it appears in Admin
Homepage email strip	All Leads
Popup form	All Leads
Settlement package booking	Package Requests
Contact page form	Contact Submissions
Migration consultation	Book Consultations
AI chat (if enabled)	All Leads

WhatsApp links appear in the footer and contact areas — URLs are set in Site Settings.

4. Blog & Content Marketing

Your blog drives trust and Google visibility. Visitors see article cards with images, categories, and excerpts. Each article has a full page with related posts.

What your team can do

- Create and publish articles with featured images
- Import drafts from PDF or Word documents
- Use AI assist to draft content and SEO fields (optional)
- Feature posts on the homepage
- Set SEO title, description, social preview, and FAQs per post

Tip: Publish at least one helpful article per month and always add a featured image for better engagement.

5. Business Directory & Reviews

Directory listings

List partners with name, category, city, descriptions, services, phone, email, website, WhatsApp, and booking links. Mark listings as**Featured** or **Published**.

Reviews

Visitors submit star ratings and comments. Reviews stay **pending** until you approve them in Admin → Reviews — only quality feedback goes live.

6. AI Assistant (Optional)

A floating chat assistant can answer visitor questions using your site content. Turn it on or off in **API Integration Settings**. Customise the greeting, title, and personality. Connect your OpenAI API key. When visitors share contact details, a lead can be created for follow-up.

7. Admin Dashboard Overview

Login: your-domain.com/admin/login

Menu	Purpose
Dashboard	Counts and recent activity
All Leads	Every enquiry
Contact / Consultations / Packages	Filtered lead views
Blog Posts	Create and manage articles
Directory Listings	Manage partner businesses
Reviews	Approve or reject feedback
API Integration Settings	Contact, social, WhatsApp, AI
SEO Manager	Page titles and descriptions

The **notification bell** alerts you to new leads and pending reviews.

8. Managing Leads & Enquiries

1. Open All Leads or a filtered view
2. Read full details and update status: New → Reviewing → Contacted → Qualified → Closed
3. Add internal notes for your team
4. Contact the visitor and mark Closed when finished

9. Managing Blog Posts

1. Blog Posts → Create
2. Enter title, category, excerpt, and body
3. Upload featured image
4. Complete SEO fields
5. Publish or save as Draft; optionally feature on homepage

10. Managing Directory Listings

Directory Listings → Create or Edit. Fill business details, set Published to go live, and Featured to prioritise in results and guide pages.

11. Managing Reviews

Reviews → read pending items → Approve to publish, or Reject/Delete if inappropriate.

12. SEO Manager

Update page titles and descriptions for Home, guides, Blog, About, Contact, Directory, and legal pages — no coding needed. Each blog post has its own SEO fields. The site also generates an automatic XML sitemap and robots.txt.

13. Site Settings & Integrations

In API Integration Settings, control contact email, WhatsApp links, response-time text, social media URLs, migration button label, directory apply link, and the AI assistant (on/off, messages, API key).

14. User Roles & Login

Role	Access
Admin	Full dashboard
Regular user	Cannot access admin

Admin accounts are created by your developer. Change default passwords after launch.

15. Quick Reference

I want to...	Go to...
See new enquiries	Dashboard or All Leads
Publish a blog article	Blog Posts → Publish
Add a partner	Directory Listings → Create
Approve a review	Reviews → Approve
Change WhatsApp	API Integration Settings
Update Google title for Home	SEO Manager → Home

16. Tips for Your Team

- Respond to leads within 24 hours
- Publish one blog article per month
- Keep directory contact details up to date
- Approve only genuine reviews
- Keep SEO titles under ~60 characters
- Always use featured images on blog posts
- Test forms after any site update
